Course Description:	This course reflects the most current and exciting fields of environmental science engineering, as a combination of ET (Environmental Technology) and BT (Bio-Technology).		
Course Objectives:	<ol style="list-style-type: none"> 1. To connect two different facets of environmental biotechnology, principles of environmental microbiology and environmental engineering. 2. To develop the basic concepts and quantitative tools in the principles part and then to apply those in the applications part. 		
Learning Outcomes (LO):	<p>Upon completion of this course, students should be able to:</p> <ol style="list-style-type: none"> 1. Exploit microbiological processes to improve environmental quality, such as preventing the discharge of pollutants to the environment, cleaning up contaminated environment, and generating valuable resources for human society; 2. Have a solid background in environmental microbiology, provided with a foundation in taxonomy, metabolism, genetics, and microbial ecology; 3. Address the microbiology concepts that are most essential for understanding the principles and applications of environmental biotechnology.
